Nanomaterials

June 12 – 14, 2012
Bad Gastein
Austria

Exploit the common effort of the
Graz University of Technology and NanoConsulting
Make use of the pooled know-how about nanotechnology and teaching.
Please read the enthusiastic [comments](#) of former participants!

This course is application-oriented. Typically, participants come from companies or institutes, which want to apply or to step in into the field of nanomaterials.

Within three days, the participants get a broader overview of the field of nanomaterials as compared to many months of tedious literature studies. The instructor, **Prof. Dieter Vollath is author of the first textbook on nanomaterials.**
([Test chapter](#), [book review1](#), [book review2](#))

As the number of participants is limited to ten, the instructor takes care to your individual questions and problems. The small number of participants makes early registration necessary.

Participants of the NanoConsulting courses come from all over the world; they come as participants, eager for knowledge, and leave as well networked friends full of new skills. For companies offering product in the direction of nanomaterials or nanotechnology, this is a great possibility to present their products in close contact to their customers.

Please find more [details](#) and [register](#) now to get the early bird discount!

I will be happy welcome you or your colleagues in Bad Gastein.

Dieter Vollath

P.S: We offer interesting discounts for universities and companies sending more than three delegates.
